Dear Hiring Manager,

I am writing to express my interest in the UX/UI Designer position at Accenture Song. With a strong foundation in applied mathematics and machine learning, combined with hands-on experience in user interface design and human-centered research, I bring a unique balance of analytical rigor and creative problem-solving to digital design.

Currently completing a second master's in mathematics and health technology engineering at Aalto University, I have explored how intelligent systems and thoughtful design intersect to improve user experiences, by doing courses for my second minor in human computer interactions.

My previous research experiences at Aalto University and VTT have honed my ability to analyze complex data and design algorithms that adapt to user behavior. I now seek to apply that same data-driven curiosity to crafting intuitive, inclusive, and visually compelling digital experiences. Tools like Figma, Python, and TensorFlow allow me to combine prototyping with rapid iteration, ensuring that design decisions are both evidence-based and user-validated.

I believe my multidisciplinary background and passion for designing solutions that make technology more human align closely with your vision.

Thank you for considering my application. I would welcome the opportunity to discuss how I can contribute to your team and help create meaningful digital experiences for your users.

Warm regards,
Yunseon Lee
